

Smart payments start before the send.

Reduce costs. Reduce fraud. Retain your customers.

Why pre-validation matters.

11%

Average cross-border payment failure rate.¹

21%

Of delays and failures stem from wrong beneficiary details.²

82%

Of businesses can't easily diagnose failures.¹

Two layers of pre-validation.

98.6%

STP RATE

STATIC

Does it follow the format?

200 countries

- ✓ Account number format
- ✓ Required data and structure
- ✓ Per-transaction limits

DYNAMIC

Will it actually land?

70+ countries

- ✓ Account status
- ✓ Name matching
- ✓ Aggregated limits

Validation runs before the order is created. No bounced payments, no re-initiation, and unlike standalone services, always included with Dandelion payouts at no extra cost.
